

Aegis-24 Installation Guide

Prerequisites

Before installing Aegis-24, ensure you have:

- Python 3.10 or higher
- pip (Python package manager)
- Git
- Docker (optional, for containerized deployment)

Step 1: Clone the Repository

```
git clone https://github.com/{ORG_OR_USER}/aegis24-platform.git  
cd aegis24-platform
```

Step 2: Create Virtual Environment

```
python -m venv venv  
source venv/bin/activate # On Windows: venv\Scripts\activate
```

Step 3: Install Dependencies

```
pip install -r requirements.txt
```

Step 4: Configure Environment Variables

```
cd harness/.env.example .env
# Edit .env with your API keys and configuration
```

Required environment variables:

- OPENAI_API_KEY - OpenAI API key for LLM access
- GUARDRAILS_CONFIG - Path to guardrails configuration
- PHOENIX_ENDPOINT - Arize Phoenix endpoint (optional)
- LANGSMITH_API_KEY - LangSmith API key (optional)
- E2B_API_KEY - E2B sandbox API key (optional)
- DATABASE_URL - PostgreSQL connection string (optional)

Step 5: Initialize Database

```
mkdir -p db
python -c "from core.research_graph import SQLiteCheckpointter; SQLiteChe"
```

Step 6: Verify Installation

```
python -c "from core.safety_gateway import SafetyGateway; print('Install"
```

Step 7: Run Tests (Optional)

```
pip install pytest pytest-asyncio
pytest tests/
```

Troubleshooting

Common Issues

1. **Module not found errors**
2. Ensure virtual environment is activated
3. Re-run `pip install -r requirements.txt`
4. **Database errors**
5. Ensure `db/` directory exists
6. Check file permissions
7. **API key errors**
8. Verify `.env` file is properly configured
9. Check API key validity

Next Steps

After installation:

1. Review [SETUP.md](#) for detailed configuration
2. Read [WORKFLOW.md](#) to understand system architecture
3. Run `make run-redteam` to verify security setup
